

Wall Rail

Freedom of movement – more time to care

Discreet and easy to use and install in both new and existing buildings

The wall mounted rail system is a discreet system that creates a safe, comfortable and efficient solution for lifting and transferring of persons with loss of function. The system can also be used for gait training, balance training and for personal care tasks.

With an “over the wall rail system” you have complete coverage and effective direct transfer from room to room, e.g. from bedroom to bathroom. When not in use the system is almost invisible, as the lifting module, lifting hanger and sling can be stored in the cupboard. The lifting module can be reached from both rooms as the cupboard can be opened from both sides of the wall.

The wall rails can be installed directly on all kinds of walls and the flexible traverse rail will automatically compensate for non-aligned (oblique) walls with up to 80 mm.

The wall rail is prepared for optional installation of LED light and can be used to mount a variety of things easily and discreetly such as paintings, decorations or curtains.

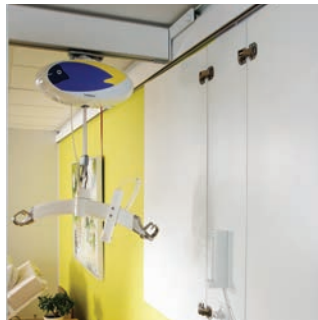

Discreet and elegant

- The system blends perfectly into the room and is almost invisible when not in use
- Integrated two-sided cupboard for storage of lift and slings
